Problem 1. Define the languages

\[ FIN = \{ \langle M \rangle \mid |L(M)| < \infty \}, \]
\[ INFIN = \{ \langle M \rangle \mid |L(M)| = \infty \}. \]

Prove that \( FIN \not\in RE \) and \( INFIN \not\in RE \).

Problem 2. Prove the following.

- \( FIN \leq_m INFIN \)
- \( INFIN \leq_m FIN \)

Problem 3. Prove that both \( FIN \) and \( INFIN \) are in neither \( RE \) nor \( co-RE \).

Hint: Start by proving \( \text{HALT}_{TM} \) reduces to \( FIN \) and \( INFIN \).

Problem 4. Define the language

\[ SS_{TM} = \{ \langle M_1, M_2 \rangle \mid L(M_1) \subseteq L(M_2) \}. \]

Prove that \( SS_{TM} \not\in DEC \).

Problem 5. Prove that \( SS_{TM} \) is in neither \( RE \) nor \( co-RE \).
