For each of the following problems, you may assume that Σ = \{0, 1\}.

**Problem 1.** Give a NFA that accepts:

a) no strings.

b) all strings.

**Solution 1.**

a)

\[ q_0 \]

b)

\[ q_0 \quad 0|1 \]

**Problem 2.** Give a NFA that accepts:

a) only the string ε.

b) only the string 0.

c) only the string 0110.

**Solution 2.**

a)

\[ q_0 \]

b)

\[ q_0 \quad 0 \quad q_1 \]
Problem 3. Give a NFA that accepts:

a) any string starting with 0110.

b) any string ending with 0110.

c) any string containing 0110 as a substring.

d) any string not containing 0110 as a substring.

Solution 3.

a)
Problem 4. Give a NFA that accepts any string with an even number of 1’s.

Solution 4.

Problem 5. Give a NFA that accepts any string containing exactly three 1’s.

Solution 5.
